PROFILE

Full-Stack Developer with **3+ years** building end-to-end products. Led development of production **IPTV streaming** platform (mobile + TV) from zero to deployment, with complete ownership of architecture, UI/UX, and technical decisions. Previously built **ERP foundation** with modern stack. Adaptable to any technical challenge - comfortable diving into unfamiliar territory and delivering results independently. **Seeking** backend, frontend, mobile, or fullstack roles.

TECHNICAL SKILLS

- **Mobile/TV:** React Native, Expo SDK 53, expo-router, expo-video, react-native-reanimated, EAS Build, FlashList, Android TV/tvOS
- **Frontend:** React (Next.js, Vite), React Native (Expo, EAS Build, expo-router), TypeScript, Tailwind, UI Kits (React Native Paper, Material Design 3, Radix UI)
- **Backend:** Node.js, Express, Prisma, FastAPI, Flask, REST APIs, SSE (Server-Sent Events)
- **Database:** PostgreSQL, MySQL, MongoDB
- **DevOps & Tools:** Docker, Drone CI, GitHub Actions, Gitea, Portainer, EAS Build, Git
- **Development Tools:** Sentry, AsyncStorage, SecureStore, Figma, Axios, pytest

Languages: Spanish (native), English

WORK EXPERIENCE

Full-Stack Developer — PyP Technologies

Jan 2025 – Present

IPTV Mobile App (React Native/Expo - Production)

July 2025 - Present

- Architected and built a complete IPTV streaming application from scratch with zero prior codebase, handling 100% of UI/UX design, technical decisions, and implementation.
- Fixed critical production bugs in expo-video library for PiP/fullscreen transitions - debugged dependency source code and implemented custom patches.
- Engineered two-tier caching system reducing API calls 60% and optimized performance with FlashList (5x faster rendering), lazy loading, and persistent video architecture.
- Deployed to 1000+ users in live city events with zero crashes.

IPTV TV App (Android TV/tvOS + Web - Near Production)

August 2025 - Present

- Building companion TV applications with focus-based navigation and DPAD controls, sharing 80% of the codebase with mobile apps.
- Implemented adaptive 10-foot UI with unified state management across platforms.

ERP System (Next.js/Node/Prisma/MySQL - Foundation)

January 2025 - Present

- Initiated full-stack ERP with SSR architecture, RBAC, and domain-driven design.
- Set up production-ready CI/CD pipeline: Drone CI + Gitea + Portainer with Docker multi-stage builds.
- Implemented i18n (next-intl) supporting 3 languages with extensible architecture.

Tech: React Native 0.79, Expo SDK 53, TypeScript, expo-router, expo-video, Next.js, Node.js, Express, Prisma, MySQL, Docker, Drone CI, EAS Build.

Frontend Developer - Clak

Mar. 2024 - Dec 2024

- Built web views and landing page for no-code platform using React, TypeScript, Tailwind CSS, Next.js, and Vite.js.
- Designed and implemented Storybook component library and design system to maintain visual consistency across products.
- Integrated ChatGPT API to enable natural language tool creation, optimizing frontend forms with Flask backend endpoints.

Tech: React, TypeScript, Tailwind CSS, Vite.js, Next.js, Figma, Python, Flask.

Software Developer - Junco Films

Oct. 2023 - Feb. 2024

- Built multi-platform web workspace for social media analytics integrating Facebook, TikTok, and Discord APIs.
- Developed SVG file editor for graphic manipulation and automated Blender rendering pipeline using Python.

Tech: Flask, ReactJS, Python, Blender, Social Media APIs.

Backend Developer - B2Gov

Sept. 2022 - Sept. 2023 [B2Gov - Website](#)

- Built web scraping system extracting procurement data from international public portals using Python and BeautifulSoup.
- Processed and stored data in MongoDB following Open Contracting Data Standard (OCDS), handling large datasets with optimized queries.
- Automated data extraction pipelines processing 50+ government portals daily, reducing manual data collection time by 80% and ensuring real-time data availability
- Built RESTful API endpoints with Flask serving processed procurement data to multiple client applications, implementing authentication and rate limiting for secure access

Tech: Python, BeautifulSoup, MongoDB, Flask.

PERSONAL PROJECTS

AventraLy - Bilingual AI Lyrics Generation Platform - Fullstack Developer

2024 - Present

- Developed production-grade fullstack platform for automatic bilingual (EN/ES) lyrics generation using AI (OpenAI GPT-4o, Claude Sonnet 4.5).
- Implemented 7-step AI pipeline with real-time streaming (SSE), multi-layer validation (semantic similarity, syllable ± 1 , chorus 85%+), and version control system.
- Optimized costs with Batch API (-50% savings), intelligent caching (7-day TTL), and daily budget tracking.
- Built async architecture with dual AI provider integration and automatic fallback (Claude → OpenAI), `asyncio.Event` for variant selection, early save pattern, and graceful degradation.

Tech: Python, FastAPI, SQLAlchemy, PostgreSQL, Next.js 14, React 18, TypeScript, TailwindCSS, OpenAI API, Claude API, Server-Sent Events, pytest.

Building a 3D Printer - Electronic Technician

2019 - 2020  3D Printer Photos

- Built a 3D printer from scratch, programming motors and configuring extruders.
- Calibrated the printer and used Cura software for 3D printing.
- Overcame logistical and technical challenges to complete a fully functional project.

Tech: Motor programming and calibration, Cura, Arduino.

EDUCATION

Instituto Politécnico Superior, Rosario — Analista Univ. en Sistemas

- 2021–2023

Coderhouse — Full-Stack Development Track

- Python, JavaScript, React, React Native, SQL (2021–2023)

Technical High School — Electronics Specialization

- 2013–2018
