PROFILE

Full-Stack Developer with **2+ years** building end-to-end products. Led development of production **IPTV streaming** platform (mobile + TV) from zero to deployment, with complete ownership of architecture, UI/UX, and technical decisions. Previously built **ERP foundation** with modern stack. Adaptable to any technical challenge - comfortable diving into unfamiliar territory and delivering results independently. **Seeking** backend, frontend, mobile, or fullstack roles.

TECHNICAL SKILLS

- **Mobile/TV:** React Native, Expo SDK 53, expo-router, expo-video, react-native-reanimated, EAS Build, expo-av, FlashList
- **Frontend:** React, Next.js, TypeScript, React Native Paper, Material Design 3, Tailwind
- **Backend:** Node.js, Express, Prisma, REST APIs; (past: Flask)
- **Database:** MySQL, SQL; (past: MongoDB)
- **DevOps:** Docker (multi-stage), Drone CI, Gitea, Portainer, EAS Build
- **State Management:** React Context API, Custom Hooks, Singleton Services
- **Practices:** Performance optimization, two-tier caching, error handling, structured logging
- **Tools:** Sentry, AsyncStorage, SecureStore, Axios, Git

Languages: Spanish (native), English

WORK EXPERIENCE

Full-Stack Developer — PyP Technologies

Jan 2025 – Present (10 months)

IPTV Mobile App (React Native/Expo - Production)

July 2025 - Present

- Architected and built complete IPTV streaming application from scratch with zero prior codebase, handling 100% of UI/UX design, technical decisions, and implementation.
- Fixed critical production bugs in expo-video library for PiP/fullscreen transitions - debugged dependency source code and implemented custom patches.
- Engineered two-tier caching system reducing API calls 60% and optimized performance with FlashList (5x faster rendering), lazy loading, and persistent video architecture.
- Deployed to 500+ users in live city event with zero crashes.

IPTV TV App (Android TV/tvOS + Web - Near Production)

August 2025 - October 2025 (Paused)

- Building companion TV application with focus-based navigation and DPAD controls, sharing 80% of codebase with mobile app.
- Implemented adaptive 10-foot UI with unified state management across platforms.

ERP System (Next.js/Node/Prisma/MySQL - Foundation)

January 2025 - June 2025 (Paused for IPTV priority)

- Initiated full-stack ERP with SSR architecture, RBAC, and domain-driven design.
- Set up production-ready CI/CD pipeline: Drone CI + Gitea + Portainer with Docker multi-stage builds.
- Implemented i18n (next-intl) supporting 3 languages with extensible architecture.

Tech: React Native 0.79, Expo SDK 53, TypeScript, expo-router, expo-video, Next.js, Node.js, Express, Prisma, MySQL, Docker, Drone CI, EAS Build.

Frontend Developer - Clak

Mar. 2024 - Agos 2024

- Built web views and landing page for no-code platform using React, TypeScript, Tailwind CSS, Next.js, and [Vite.js](#).
- Designed and implemented Storybook component library and design system to maintain visual consistency across product.
- Integrated ChatGPT API to enable natural language tool creation, optimizing frontend forms with Flask backend endpoints.

Tech: React, TypeScript, Tailwind CSS, Vite.js, Next.js, Figma, Python, Flask.

Software Developer - Junco Films

Jan. 2024 - Feb. 2024 [Junco Films - Website](#)

- Built multi-platform web workspace for social media analytics integrating Facebook, TikTok, and Discord APIs.
- Developed SVG file editor for graphic manipulation and automated Blender rendering pipeline using Python.

Tech: Flask, ReactJS, Python, Blender, Social Media APIs.

Backend Developer - B2Gov

Sept. 2022 - Sept. 2023 [B2Gov - Website](#)

- Built web scraping system extracting procurement data from international public portals using Python and BeautifulSoup.
- Processed and stored data in MongoDB following Open Contracting Data Standard (OCDS), handling large datasets with optimized queries.

Tech: Python, BeautifulSoup, MongoDB, Flask.

PERSONAL PROJECTS

Game Development - Global Game Jam - *Unity 2D Developer*

Jan- 2022 [Global Game Jam - Alasine Game](#)

- Developed a game in 48 hours for the Global Game Jam, using C# and Unity 2D.
- Implemented part of the graphical interface, learned Unity libraries, and collaborated in a Git repository with teammates.

Tech: C#, Unity 2D, Git.

Building a 3D Printer - Electronic Technician Internship

2019 - 2020  3D Printer Photos

- Built a 3D printer from scratch, programming motors and configuring extruders.
- Calibrated the printer and used Cura software for 3D printing.
- Overcame logistical and technical challenges to complete a fully functional project.

Tech: Motor programming and calibration, Cura, Arduino.

Hackathon Participation - Smart City Dashboard

Nov. 2018 - Dec. 2018

- Participated in a school hackathon to develop a "Smart City" dashboard.
- Configured a dashboard for real-time monitoring of city services using Arduino.
- Developed an intuitive interface for controlling traffic lights, water pumps, and vehicle tracking.
- Collaborated with multiple teams and achieved a podium finish in the event.

Tech: Arduino, UI/UX, Monitoring Dashboard.

EDUCATION

Instituto Politécnico Superior, Rosario — Analista Univ. en Sistemas

- 2021–2023 (*Incomplete*)

Coderhouse — Full-Stack Development Track

- Python, JavaScript, React, React Native, SQL (2021–2023)
